- 2001-00256 IQ6 Telco Gateway ISDN (Non-US)
- 2001-00255 IQ6 Telco Gateway ISDN (US)
- 2001-00248 iQ6 Telco Gateway POTS

### Thank you!

We appreciate your purchase of a Telos broadcast phone product. This sheet gives you brief setup instructions for the VSet phones. The manual that comes with your VX Engine, iQ6 Telco Gateway, HX6 Digital Talkshow System gives detailed descriptions of the phone system, including operating instructions for this VSet, and what your network needs to support it. Questions? Call us at +1-216-241-7225.

## 1 Before You Begin...

Your new Telos VSet phone is designed for fast, intuitive control of Telos VX and iQ6 Talkshow Systems. Please configure your Telos phone system according to the instructions in the User Manual before connecting your VSet to the network.

VSet phones receive 48-volt power through their Ethernet connection, allowing PoE (Power over Ethernet) to be supplied by Ethernet switches equipped to provide it. If your Ethernet switch does not have PoE capability, please use the PoE injector included with your VSet. The PoE adapter is also required for non-switched direct connections to the HX6 Digital Talkshow System.

## 2 Connect Your VSet

- Determine whether your system's Ethernet switch pro-

vides PoE. If so, connect one end of the supplied Ethernet cable to one of your switch's PoE-enabled ports, and the other to your VSet.

### OR:

- If your switch does not have PoE capability, connect the included PoE Injector to the supplied Ethernet cable. Connect one end of the cable to your Ethernet switch, and the other to your VSet.

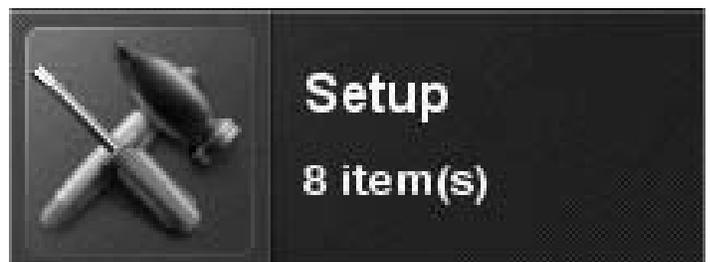

A direct, non-switched connection between the HX6 and a VSet is possible without use of a cross-over cable. Standard ethernet cables from the HX6 between the PoE power supply and both the HX6 and VSet are acceptable.

Note: In factory default configurations, the IP addresses between a VSet and an HX6 should default to directly compatible settings.

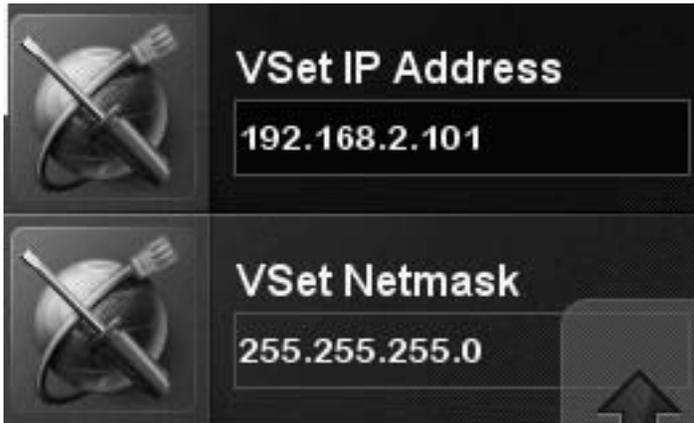

The LED indicators near the VSet connection port should show solid green (good connection); the yellow LED should be flashing, indicating data flow. After a few seconds, the VSet's LCD screens will light. If they do not, check the connection of the PoE Injector and / or Ethernet cable.

## 3 Assign an IP Address

Press the  Menu key and find the *Setup* option.

Press and hold the key next to *Setup* for 3 full seconds and then release. No visible change will occur while long-holding this button. However, the long-press is needed, or the *Setup* options will be disabled on the next screen.

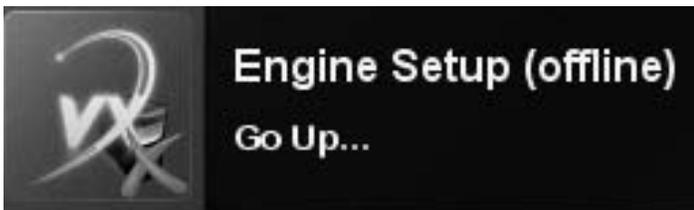

Enter the IP address and netmask values that you wish to assign to the phone. When the IP address is entered, press the "Enter" softkey to save the entry.

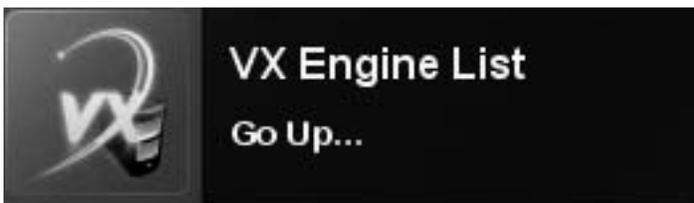

Press the  Menu key to exit and save settings.

#### ④ *Connect to the Gateway device*

Press the  Menu key and find the *Engine Setup* option.

Press and hold the key next to *Engine Setup* for 3 full seconds and then release. No visible change will occur while long-holding this button. However, the long-press is needed, or the *Engine Setup* options will be disabled on the next screen.

Press the *VX Engine List* button to select from the list of VX Engines installed on your network, or manually key the IP

address of the VX Gateway, or other Telos phone system you wish to connect with, into the *Engine IP* address box.

Press the "Enter" softkey to save the entered IP.

Press the  Menu key to exit and save settings.

#### ⑤ *Select Show*

Select the correct Show from the VX Gateway or other Telos phone system. The VSet will automatically connect to your telephone system.
