iXm | Uplink

briefing book

Thank you
for purchasing the Yellowtec iXm
Recording Microphone and iXm Uplink App

Yellowtec iXm: welcome to recording 2.0

iXm is a broadcast quality recording microphone created by broadcasters for broadcasters. With intuitive operation and robust construction, iXm delivers pristine sound quality without the need to monitor levels or make other adjustments.

iXm Uplink: the new App for your iXm

iXm Uplink is a new recording iOS app for the iXm digital recording microphone. The new app facilitates the uplink of data from the iXm microphone by IOS devices like the iPhone. The iXm Uplink App allows trimming, archiving and several useful features like the use of meta tags. This will be of particular interest to reporters, as it allows them to email recordings directly to the studio after tagging their files

iXm Uplink interface

Navigation
iXm: folder on SD Card

Mobile: folder on
mobile device

Menu: active, when
audiofile selected

Edit: only available
in "mobile" mode.
Active, when audio file
selected.

Current position
hours, minutes, se-
conds, 30/s (frames)

HH:MM:SS.FF

iXm Logo
Touch on iXm starts
scanning process.
Lists "iXm" and "mo-
bile" are updated.

Volume
Sets the volume.
(volume depends
on overall volume of
the device). Audio
will be played even
when ringtone is
switched off.

Timeline
Shows the current
position in selected
audiofile and can
also be used to
browse your file.

REW: jumps back
10 seconds / jumps
back to next marker

PLAY: plays
selected
audio

FF: jumps forward 10
seconds / jumps for-
ward to next marker

**PAUSE:** pauses
audio, hit again
to resume audio

1. Setup your WLAN
Read the FlashAir™ Briefing Book to setup your wireless SD Card.

Please note:
Scanning process only starts, if WLAN and FlashAir™ SD Card are setup correctly.

2. Scanning process starts automatically

The "scanning..." screen appears.

Files on the SD card can only be updated when a WIFI connection is active.

Please note:
Scanning process only starts, if WLAN and FlashAir™ SD Card are setup correctly.
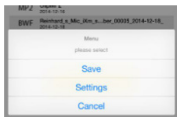

Interface on IOS device
Notice that files are still located on the SD card of the microphone.

Select file
Use your IOS device to play or save a selected file.

| IXM | MOBILE | MENU | EDIT |

Remote Connection Available

Save
Saves the selected file without changes to the audio.

Settings
General Settings.

Cancel
Closes menu without saving changes.

| IXM | MOBILE | MENU | EDIT |

Remote Connection Available

Please note: in order to use the transmission function the WIFI connection to iXm must be disconnected, otherwise no Internet connection can be established. Simply turn off the iXm microphone (press both STOP buttons on front- and backsided keyboard simultaneously).

Depending on the settings of your IOS device and the local conditions (surrounding wireless networks) your IOS device should establish an internet connection automatically via WLAN or WWAN. If necessary check the connections in the settings or the „status bar" of the device.
